Note: Funds for this dataset were provided in part by:

- A federal grant awarded to the UO from the Institute of Education Sciences, U. S. Department of Education: *Reliability and Validity Evidence for Progress Measures in Reading* (R324A100014, budget \$1,596,638 funded from June 2010 – June 2014).
- A federal grant awarded to the UO from the Institute of Education Sciences, U. S. Department of Education: *Developing Middle School Math Progress Monitoring Measures* (R324A100026, budget \$1,631,401 funded from June 2010 – June 2014).
- A federal grant awarded to the UO from the Institute of Education Sciences, U. S. Department of Education: *National Research and Development Center on Assessment and Accountability* (R324C110004, budget \$11,677,134 funded from July 2011 – June 2016).

Source of Demographics for Stratification: These norms were generated using demographics from U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey", 2010-11, Version 2a; and "Local Education Agency Universe Survey", 2010-11, Version 2a; and "State Nonfiscal Survey of Public Elementary/Secondary Education", 2010-11, Version 1a.

The University of Oregon is committed to the policy that all persons shall have equal access to its programs, facilities, and employment without regard to race, color, creed, religion, national origin, sex, age, marital status, disability, public assistance status, veteran status, or sexual orientation. This document is available in alternative formats upon request.

## Introduction

Previous norms for the easyCBM assessment system were computed using scores from all students who took each measure for every grade and benchmark season (fall, winter, and spring). During the 2013-14 school year, new national norms were developed to more accurately (proportionately) represent reading and mathematics performance by two variables: region and student demographic.

### By Region

We proportionately and randomly sampled 500 students from each of four regions of the country (Midwest, West, Northeast, and Southeast). When too few students were present in a given region for a particular measure/season, we weighted the population in order to reach 500 (so long as the weight did not exceed two). Percentiles by region are displayed in tables at the top of each page (pp. 15-170) for every season, grade, and measure available on easyCBM. If a region required weighting a sample at more than two, we did not calculate norms, indicating this with an asterisk in the table. To assist in navigating through all of the tables in the document, each page contains a heading at the top right listing the season, grade, and measure. In addition, the index of all measures found on pages 6-7 serves as a guide through the document.

**Random Sample by Region**

Region	5th	10th	15th	20th	25th	30th	50th	75th	90th
MW	0	0	0	1	1	2	6	14	24
NE	0	0	0	0	1	2	6	11	22
SE	0	0	0	1	1	2	9	18	29
W	0	0	0	0	0	0	3	10	24
<b>MEDIAN</b>		0			1		6	13	24

Note that the final norms reported in the summary tables at the beginning of the document

(pp. 8-14) are calculated using the median of the four regions and can also be seen on the bottom line of each norm table for the respective seasons, grades, and measures.

### By Student Demographic

In addition to this set of norms calculated by region, we also developed a set of norms using a stratified random sample of students by gender and ethnicity-race (white female, white male, non-white female, non-white male). Race and ethnicity were aggregated, as the count of students with complete data for both categories was insufficient for disaggregation. In this process, Hispanic students were counted as “non-white” even when lacking a race designation other than “white.” Ethnicity-race codes from the most recent Common Core Data published by the National Center on Education Statistics (2010-11) were used in this process. Like the norms developed by region, these norms based on gender and ethnicity-race are displayed in tables at the bottom of each page by season, grade, and measure.

**Random Sample by Gender and Ethnicity-Race**

<b>Students</b>	<b>5th</b>	<b>10th</b>	<b>15th</b>	<b>20th</b>	<b>25th</b>	<b>30th</b>	<b>50th</b>	<b>75th</b>	<b>90th</b>
White Females	0	0	0	0	0	1	5	12	22
White Males	0	0	0	0	0	0	3	11	19
Non White Females	0	0	0	0	0	0	1	6	15
Non White Males	0	0	0	0	0	0	1	6	15
<b>MEDIAN</b>		0			0		2	9	17

In order to provide a deeper look at scores for every region and/or gender-ethnicity-race included in the norming process, tables providing summary statistics (mean and standard deviation) for each region and each demographic group included in the stratified random samples used to generate norms are included at the center of each page, in the format seen below. As with the regional norms, if a group required weighting a sample at more than two, no statistics are reported for the group.

**By Region**

<b>Region</b>	<b>N</b>	<b>Ave</b>	<b>SD</b>
MW	500	9.4	9.6
NE	500	8.3	8.6
SE	500	11.4	11.1
W	500	7.1	9.5

**By Gender and Ethnicity/Race**

<b>Students</b>	<b>N</b>	<b>Ave</b>	<b>SD</b>
White Females	476	7.87	9.2
White Males	500	6.4	8.4
Non White Females	500	4.6	7.8
Non White Males	500	4.5	7.7

All the literacy norms included in this document were calculated based on score values present in 2012-2013. The mathematics measures changed for 2013-2014, so the norms for both the CCSS and NCTM aligned math measures were calculated using 2013-2014 data. For those who seek a more detailed explanation of how all norms were calculated, a detailed explanation is included in a technical report along with the norm summary tables found below on pages 8-14. This document serves as an extension of the summary tables presented in that section.

An important disclaimer to note is that this set of norms, designed for district use, may differ slightly from the individual percentile ranks (IPRs) calculated for every potential raw score value, as the two calculations are based on different random samples of students from each region. Such slight variations between the group norms and the individual percentile ranks should not cause alarm, but instead remind teachers and administrators that all measurement contains some minor amount of error: score values are best represented in confidence bands (the range of scores within which we can be confident a specific score exists), rather than as static numbers. Additionally, the IPRs are only sampled proportionately by region, and not by gender-ethnicity-race.
